

26. Validate Email Address

```
#include <stdio.h>
```

```
#include <string.h>
```

```
int main()
```

```
{
```

```
    char email[100];
```

```
    int i;
```

```
    int at = 0;
```

```
    int dot = 0;
```

```
    int valid = 1;
```

```
    printf("Enter email address: ");
```

```
    scanf("%s", email);
```

```
    for (i = 0; email[i] != '\0'; i++)
```

```
    {
```

```
        if (email[i] == '@')
```

```
            at++;
```

```
        if (email[i] == '.')
```

```
            dot++;
```

```
    }
```

```
    if (at != 1 || dot == 0)
```

```
        valid = 0;
```

```
    if (email[0] == '@' || email[0] == '.')
```

```
    valid = 0;

    if (strstr(email, "@.") != NULL ||
        strstr(email, ".@") != NULL)
        valid = 0;

    if (valid)
        printf("Valid Email Address\n");
    else
        printf("Invalid Email Address\n");

    return 0;
}
```

OUTPUT

```
Enter email address: student@gmail.com
Valid Email Address
